## Drug recognition evaluation report/narrative

- 1: **Location:** The evaluation was conducted at the Williston Barracks in the DRE processing room.
- 2: **Witness:** The entire evaluation was witnessed by S/Tpr. Kamerling
- 3: **Breath Test:** [REDACTED] provided a sample of her breath with a result of .000% BrAC at approximately 1912 hours using an Alco IV serial number 042439.
- 4: **Notification/Interview of A/O:** VSP Williston Dispatch advised S/Tpr. Kamerling was requesting a DRE for [REDACTED] after he responded to a motor vehicle crash. I spoke with S/Tpr. Kamerling who stated he was notified of a Be On the Look Out (BOL) for a vehicle traveling south on Interstate 89 in the Town of Richmond operating in an erratic manner. S/Tpr. Kamerling advised prior to catching up to the vehicle it crashed. S/Tpr. Kamerling stated while speaking with the operator he observed signs of impairment. After the operator provided a sample of her breath he requested a DRE.
- 5: **Initial Observations:** I first observed [REDACTED] while she was sitting in a holding cell at the Williston Barracks. She was requested to exit the cell and walk to the DUI processing room. She was unable to walk unaided. She stumbled and held onto a door for balance. I noted her eyelids were droopy as she was exhibiting ptosis.
- 6: **Medical Problems:** [REDACTED] stated she suffered from a half numb left foot and a sore right foot. She also stated both of her feet are swollen. She advised she was currently being treated by a doctor but did not have a diagnosis yet.
- 7: **Psychophysical Tests:** [REDACTED] exhibited impairment though out all portions of the psychophysical tests. On the Modified Romberg Balance, [REDACTED] swayed side to side approximately one inch, exhibited eyelid tremors, and took forty four seconds to estimate the passage of thirty seconds. On the Walk and Turn, [REDACTED] could not balance during instructions, missed touching heel to toe on steps six and eight, and used the wall for balance twice in the first nine steps. She turned by taking several steps with both feet. On the second set of nine steps, [REDACTED] stepped off line on step three and missed touching heel to toe on step six, she had to use the wall for balance, and took twelve steps when instructed to take nine. [REDACTED] used her arms for balance through out the exercise. On the One Leg Stand, [REDACTED] could not balance on either foot for longer than two consecutive seconds. While attempting the exercise, [REDACTED] stated "I can't even stand for two seconds." The test was stopped. On the Finger to Nose, [REDACTED] used the pad of her finger on numbers two, four, and five when she was instructed to use the tip of her finger. She failed to touch the tip her nose on step six.

## Drug recognition evaluation report/narrative

8: **Clinical Indicators:** EYES: [REDACTED] exhibited moderate ptosis. I noted her eyes were watery and she exhibited a lack of convergence. [REDACTED] pupil size was at the low end of normal in room light and moderately below normal in near total darkness. When checking her pupils reaction to light there was little to no change visible. VITALS: [REDACTED] blood pressure was below normal at 108/62. Her body temperature was below normal at 96 degrees.

9: **Signs of Ingestion:** Several times though out the evaluation her head would fall forward to where her chin would be resting on her chest. Her body would then fall forward and I would have to tap her on the arm to prevent her from falling. [REDACTED] appeared "On the Nod". [REDACTED] had several healed puncture wounds on both arms and the backs of both hands. She was chewing on a piece of clear plastic that she initially stated was gum. It was too chewed up to determine what it was originally. When she spoke her voice was slurred and raspy. [REDACTED] had a dry mouth and thick mucus.

10: **Statements:** [REDACTED] stated she was a recovering heroin user and has been clean for six years. She stated she uses Suboxone, 8 mg twice daily, Lyrica, 50 mg, Clonazepam 1mg, and Tramadol 50 mg. She was adamant she had not taken the Clonazepam that she had just purchased this day and when we counted the pills, at her request, three were unaccounted for. [REDACTED] stated "I must have taken them then". Several times though out the evaluation [REDACTED] stated "I am a terrible mom" due to her two year old son being in the vehicle when it crashed.

11: **Opinion of Evaluator:** In my opinion, [REDACTED] was under the influence of Narcotic Analgesics and was unable to operate a motor vehicle safely.

12: **Toxicological Sample:** [REDACTED] refused to have a sample of her blood drawn

13. **Miscellaneous:** I am a Nationally Certified Drug Recognition Expert since July 2008.
